

COLOURFUL GLAZES

COLOURFUL GLAZES - EXAMPLES

Products covered with colourful glaze are characterized by variable intensity and uniformity of colour, clarity of reliefs and a visible effect of colour refraction on the product (waves, shading, etc.). Various types of brightening in the glaze are a natural result of the immersion glazing process. Thanks to this, we have achieved an effect in which none of the products are absolutely identical, thus giving a unique, individual character to the table arrangement.
